

Lifting Equipment Solutions

All lifting and lifted equipment is subject to strict industry regulations. Vertech's quality assured lifting and lifted equipment inspection division ensures your equipment remains in compliance, supporting documentation is kept in order and the lifetime of equipment is maximised.

Technical competence of inspectors is of paramount importance and is assured through continual training, staying abreast of industry developments and regular review of national and international standards including DNV and LOLER. This technical competence is backed up by our NATA accreditation which subjects our systems, procedures and inspectors to regular high level auditing. Our NATA accreditations include AS/NZS ISO/IEC 17020 (Type A Inspection Body); we are the only company to be NATA accredited for conducting Lifted/Lifting Verification Inspection (pre-loadouts).

In line with Vertech's policy of zero harm to people and environment, best practice solutions are offered on all inspection/certification matters to ensure a safer workplace for all stake-holders and provide confidence that equipment is fit for purpose.

The Oil & Gas industry demands prompt and efficient delivery of service; in the case of lifting equipment certification rapid turnaround of inspection certification is crucial. Vertech has invested in a bespoke database that has been developed over a number of years in consultation with a range of clients. The software tracks inspections, links and stores relevant documentation and generates inspection certificates instantly. The database can track an entire facility's inventory that may contain thousands of items including safety equipment, drill tools etc and alert the owner when items are due for re-certification.

Lifting Equipment Solutions

Our lifting inspection service includes;

- ✓ Certified Visual Inspection of slings and rigging.
